

CRANIAL ADJUSTING

The human skull is comprised of 22 bones that are joined together with sutures (puzzle like structures). Although the sutures cannot be pulled apart, the bones in the skull can be knocked out of their proper alignment. **The onset of your health problem(s) may be the result of an injury to the head.**

It was discovered in the mid 70's that there was a space between the bones in the skull and they contained blood supply, nerve supply and connective tissue. It was also discovered that there was a rhythm of movement between each of the cranial bones.

Recent microscopic research has demonstrated that nerves from the skull and spine control the immune system right down to the cellular level.

Extensive scientific cranial mapping has been done that establishes what parts of the brain control which functions.

Dr. Roger Turner has compiled a "Cranial Mapping Chart" that summarizes all the latest research on brain function. To see, click [Cranial Mapping Chart](#)

C.A.T.S. has also produced an excellent cross section of the brain and skull. This demonstrates a before trauma and after trauma view of the brain. To see, click [Cross Section Chart](#)

How I discovered Cranial Adjusting

Initial Problem

My son got the handle bar of another BMX racer caught in his helmet and threw him to the ground. I did what any Chiropractor would do; I rushed to him, examined and adjusted his neck right there on the track. The bruise on his left forehead that went into his hair line would go away, I thought. My son finished the races that Sunday. He came home from school on the next day and asked me "Dad, what is wrong with me? I can't read or do math or write properly. Am I going to die?"

The next weekend I went to New York to learn N.O.T. from late Dr. Karl Ferrari. I learned his method of adjusting the sphenoid. In 10 days my son was back to normal.

I started treating other patients with learning difficulties with equally amazing results. Parents would ask. "Can you also help my other children that have ADD and ADHD?" We knew if the skull was out of place, the brain would not function properly and I developed a much more extensive protocol for adjusting the skull and started to attract a wide variety of special needs children. Another mother asked me if I could help her Autistic child. I told her, "You never know how much you can help, but we do know the boy will be much better off with his spine and skull corrected and I would love the opportunity to see how much we can help."

Share with other Chiropractors

Chiropractors from all over the world would bring their special need child to us for help. When they saw the results we were getting, they wanted us to teach them the technique. In 2003 Cranial Adjusting Turner Style (C.A.T.S), was created. Now there are over 750 C.A.T.S. Chiropractors worldwide getting amazing results with head injuries, headaches, special needs children, failure to latch babies, dementias, poor memory, personality disorders and autism.

Been Everywhere; Done Everything

Many patients are frustrated because they are not getting the results they want. They have been everywhere and done everything and still have their health challenges.

Solution

Everything has not been done until the skull has been examined and the misalignments corrected.

Benefits

Initial examination reveals cranial misalignments.

Treatments are fast and painless.

Results are seen on the first day in most patients.

Initial intensive care can be done in 2 weeks.

We never know how much we can help. That depends on so many factors. What we do know is that everyone is better off with the cranial bones aligned.

We appreciate the opportunity to see how much change is possible.

The Turner Head Injury & Wellness Center has put together a technique combining a number of disciplines for maximum results. The skilled hands of Dr. Roger Turner D.C. can detect misalignments in the skull very quickly. Then with 35 years of Chiropractic experience and 23 years of Cranial Adjusting, Dr. Turner is able to realign the bones in the skull with precision and accuracy.

Who Would Benefit from Cranial Adjusting?

Anyone who has suffered a trauma to the head should be examined for skull bone misalignments, especially if the injured person begins to experience, what may seem as, unrelated health problems after a head injury.

If you have suffered a head trauma during the birthing process with instrumentation such as: forceps, suction, and vacuum extractors are common causes of misaligned skulls. In fact, many of the patients seen at our clinics have suffered lifelong health problems because they were never aware of their birthing trauma.

Anyone who is currently afflicted with any of the health conditions listed below:

ADD, ADHD	Headaches	Premature Aging
Autism	Learning Difficulties	Post Concussion Syndrome
Behaviour Issues	Learning Disabilities	Seizures
Dyslexia	Migraines	Sports injuries
De Georges	OCD	Retts Syndrome
Fibromyalgia	PDD	Aspergers

International Referrals

Patients are referred to Turner Wellness from all over the world by other Chiropractors and satisfied patients. They come for three to six days and receive 5 adjustments per day. Then we send them to a C.A.T.S. practitioner in their area for maintenance. [Clinic Contact information](#)

Get Amazing Results

When a doctor can't figure out what is causing a patient's condition or why they have such a wide variety of symptoms, sometimes they conclude that the patient may be a hypochondriac and imagining all these symptoms. Attempts to correct the condition may be discontinued. When the patient's complaints are dismissed, they feel a sense of self-doubt and insecurity.

Do not give up. Never give up. There is always someone that has found a solution to the conditions you have. But, there is also a window of opportunity, which must be capitalized on as early as possible.

If attempts to improve your health have been unsuccessful, then correction of the misalignments in the skull and spine may be the missing link in your treatment program.

“There is nothing more satisfying than getting amazing results that were previously thought of as unattainable with conditions considered incurable.” Dr.T

“We are not treating medical conditions, only correcting the misalignments in the spine and skull and amazing things happen.” Dr. T
